CHAIRS & SEATING

EMOJI™ SEATING

EMOJI™ seating helps create a delightful experience for children and a refined, performance driven experience for adults. Each piece is designed to support us in how we move and find comfort at various ages as well as how we evolve from seeking playfulness to focus. Four sizes cover all ages and hold characteristics specific to the physical and skeletal needs of each.

FEATURES

SHELL & FRAME

Seats are constructed using a semi gas-assisted process resulting in a lightweight, one-piece, plastic shell. Attached to the plastic shell is a welded steel, powder-coated, 1" round tube frame. 4-Leg chair frames are 14 gauge, .074 thick steel. Cantilever chair frames are 12 gauge, .120 thick steel.

RUBBER BUMPERS

The underside of the shell is designed with rubber bumpers to protect chairs and surfaces from being scratched when stacked.

TWO BASE OPTIONS

Available in two base options: 4-Leg and Cantilever.

STACKING

Chairs stack up to five to allow for easy, compact storage.

COLORS

Available in 16 plastic and 5 frame paint colors.

GLIDES OR CASTERS

4-Leg seating is offered in glides or casters. Glide bottom material should be selected based on flooring type.

A CHAIR FOR EVERY AGE

At every age, EMOJI™ Seating is designed to support us. The support structure of the adult chair more closely mimics the grown-up spine and pelvis. Different hole patterns on the chairs provide the right aeration for the age group, allowing the body to breathe. Different hole patterns in shell provide the right aeration for the age group, allowing body to breathe.

SENSORY ERGONOMICS

The human perception of comfort is affected by every aspect of our environment. EMOJI™ features and details were designed to generate a sensory response.

TEXTURE

We see with our hands. This means that what we touch and feel has a major effect on how we respond to things. Cold, rough, and sharp textures are all are interpreted as uninviting conditions. EMOJI™ has textured zones to hold you firmly in your seat while you're sitting down and to keep rough areas away from where you touch. The human brain also responds exceptionally well when presented with a single, obvious place or method to grab, hold, or move something. The EMOJII™ is handle is a critical gesture of empathy to the human brain.

COLOR CONNECTION

Color can be used scientifically in architecture to promote certain types of behaviors or emotions in an environment. The human eye and brain can interpret color and generate an emotional or physical response based on the color itself. Bright primary colors, neons, and bright multicolored patterns will generate excitement, increase awareness of overall surroundings, and heighten the mind's production of chemicals that increase energy and activity. Muted colors and monochromatic environments have the opposite effect. They trigger the release of chemicals in the brain that will promote relaxation and calm.

SOUND

Sound is an unlikely, but major source of disruption. Additionally, ambient noise is constantly requiring the ears and brain to interpret sound, which leads to fatigue by the end of the day. EMOJI™ uses rubber bumpers and quiet casters to minimize distraction.
